SUBMISSION READINESS ASSESSMENT

# Acme Mobile

## Prepared for Acme Inc

Engagement BB-20261120-ACME-MOBILE
November 20, 2026
Framework: capacitor — configuration read from capacitor.config.json
43 checks · gate v0.10.0

**QUOTABLE · 3 priced items**

Quotable means every failed check below carries a fixed price. A finding that cannot be fixed would read BLOCKED instead.

| CHECKS PASSED | FAILED | WARNINGS | NEEDS INPUT | NOT APPLICABLE |
|---|---|---|---|---|
| 22 | 3 | 3 | 5 | 10 |

## WHAT WAS CHECKED

| RESULT | ID | AREA | CHECK | EVIDENCE |
|---|---|---|---|---|
| FAIL | ios.privacy_manifest | iOS | PrivacyInfo.xcprivacy present in the app target<br>required since 2024-05-01 | no PrivacyInfo.xcprivacy outside Pods/<br>Fix: declare required-reason APIs (file timestamps, UserDefaults, disk space) |
| FAIL | web.42 | Product | Not a thin web wrapper (guideline 4.2)<br>4.2 minimum functionality | web-wrapper shell with 4 native capability dep(s) — reads as a website in a frame<br>Fix: add real native capability (haptics, notifications, offline storage, share, camera) or reprice as a rebuild |
| FAIL | store.assets | Store | Screenshots ready for both stores | no screenshot directory found<br>Fix: App Store needs 6.9" and 6.5"; Play needs at least 2 phone shots |
| WARN | proj.nodemodules | Project | node_modules not committed | no .gitignore<br>Fix: add .gitignore with node_modules and .env |
| WARN | cfg.versions | Config | Version and build numbers set explicitly | 2.0.0; ios build number unset (prebuild defaults to "1")<br>Fix: set explicitly now — the first upload works either way, the second one collides |
| WARN | ios.encryption | iOS | Export compliance answered | not declared in Info.plist — answered per upload instead<br>Fix: declare false unless the app implements its own crypto |
| UNKNOWN | ios.deployment | iOS | Deployment target is current enough | deployment target not found in config, Podfile or project<br>Fix: confirm in Xcode |
| UNKNOWN | store.policy | Store | Privacy policy and support URLs declared | no privacy policy URL anywhere in the repo — it may still exist as a listing-side field<br>Fix: get the live URL in writing; a missing policy blocks both stores |
| UNKNOWN | build.clean | Build | Clean-clone build reproduces without the dev server | not run (pass --build). This is the check that catches 'works on my laptop' exports; install runs repo scripts, so it is opt-in.<br>Fix: run on a scratch copy before quoting |
| UNKNOWN | manual.licensing | Client-only | Content licensing, trademarks, fonts, music | cannot be determined from a repo — requires a written warranty from the client<br>Fix: get it in writing before submission; IP complaints land on the account holder |
| UNKNOWN | manual.reviews | Client-only | Prior rejection history and existing listings | not visible from source — ask for App Store Connect / Play Console history<br>Fix: a previously rejected app needs the rejection text before quoting |
| PASS | proj.package | Project | Project manifest parses; framework identified | package.json ok — capacitor; 7 deps |

| RESULT | ID | AREA | CHECK | EVIDENCE |
|---|---|---|---|---|
| PASS | proj.lockfile | Project | Lockfile committed (reproducible install) | package-lock.json |
| PASS | proj.scale | Project | Repository size within what this audit can read | 7 text files scanned |
| PASS | cfg.scope | Config | Auditing the app the client means | [client repo] |
| PASS | cfg.ids | Config | Bundle id / package name present and valid | com.cap.fixture / com.cap.fixture (from capacitor.config.json) |
| PASS | cfg.collision | Config | Bundle id does not collide with a reserved id | 6 reserved ids checked, no collision |
| PASS | cfg.drift | Config | Committed native projects match the app config | native versions match the app config |
| PASS | ios.perms | iOS | Every sensitive API has an NS*UsageDescription ITMS-90683 | no sensitive-API deps found |
| PASS | ios.icon | iOS | App icon is 1024×1024 with no alpha channel ITMS-90717 | ios/App/App/Assets.xcassets/AppIcon.appiconset/AppIcon-512@2x.png 1024×1024, no alpha |
| PASS | android.package | Android | applicationId valid for Play | com.cap.fixture |
| PASS | android.target | Android | targetSdkVersion ≥ 35 Play requirement | targetSdk 35 |
| PASS | android.perms | Android | No inherited or unjustified sensitive permissions Play data-permissions policy | no sensitive permissions declared |
| PASS | android.manifest_hygiene | Android | Release manifest has no debug or data-leak settings Play policy + basic security | no debuggable, legacy-storage, backup or stray-export settings |
| PASS | android.icon | Android | Adaptive icon configured | launcher icon resources present (android/app/src/main/res/mipmap-hdpi/ic_launcher.png) |
| PASS | store.name | Store | App name is within store limits and rules | "Cap Fixture" (11 chars) |

| RESULT | ID | AREA | CHECK | EVIDENCE |
|---|---|---|---|---|
| PASS | prod.localhost | Product | No dev-only endpoints left in the app source | no localhost, loopback or .local endpoints in source |
| PASS | repo.signing | Handoff | No signing material committed to the repo<br>key compromise | no keystores or profiles found (not a git repo) |
| PASS | repo.secrets | Handoff | No secrets committed in the repo | no credential patterns; no tracked .env |
| PASS | build.path | Build | A known build path exists | ios/ project · android/ gradle project |
| PASS | android.cleartext | Android | Cleartext HTTP not enabled | no cleartext traffic allowance |
| PASS | store.ids | Config | iOS and Android identifiers agree | com.cap.fixture |
| PASS | sdk.inventory | Privacy | Third-party SDKs inventoried for the privacy labels | no third-party SDKs detected in dependencies |
| SKIP | ios.att | iOS | ATT prompt configured for IDFA / ad SDK<br>5.1.2 | no ad SDK in dependencies |
| SKIP | ios.privacy_reasons | iOS | Required-reason APIs declared in the privacy manifest<br>ITMS-91053 | no app-level privacy manifest to compare against |
| SKIP | ios.displayname | iOS | Display name is set (not the bundle name) | no Info.plist to inspect |
| SKIP | ads.qa | Ads | Ad QA cannot tap a live ad from a release build<br>invalid-traffic suspension risk | no AdMob dependency |
| SKIP | pay.external | Policy | Digital goods go through IAP, not an external checkout<br>3.1.1 | no payment code found |
| SKIP | acct.deletion | Policy | Account deletion exists if accounts can be created<br>5.1.1(v) | no auth SDK in dependencies — no account surface to delete from |

| RESULT | ID | AREA | CHECK | EVIDENCE |
|---|---|---|---|---|
| SKIP | `ugc.moderate` | Policy | User-generated content has reporting and blocking 1.2 | no backend/auth SDK — no UGC surface detected |
| SKIP | `store.shot_dims` | Store | Screenshots meet the stores' size requirements | no screenshot directory to measure |
| SKIP | `store.urls_live` | Store | Privacy policy and support URLs actually resolve | not checked — pass --online to resolve the URLs (makes network requests) |
| SKIP | `ios.ats` | iOS | App Transport Security not blanket-disabled App Review asks why | no Info.plist to inspect |

## QUOTE

These are fixed prices for me to do the work — not an invoice. Nothing is owed unless you ask me to start; the report itself is the whole deliverable.

| | |
|---|---|
| Managed launch — both stores, store assets, submission, rejection handling | $495 |
| PrivacyInfo.xcprivacy present in the app target remediation | $50 |
| Not a thin web wrapper (guideline 4.2) remediation | $350 |
| Screenshots ready for both stores remediation | $125 |
| **Total — founding rate** | **1020** |
| Same scope at the standard rate | $1420 |
| Founding rate saves | $400 |

## WHAT THIS REPORT DOES NOT COVER

> Limited to the checks above, as of the timestamp on the cover. It is not a security audit, not a code-quality review, and not a guarantee of App Review acceptance.
>
> Still to be confirmed by the client:
>
> - Launch on a clean device with no dev server or debugger attached
> - App Store Connect / Play Console history (prior rejections, existing builds)
> - Content licensing and trademark clearance
> - EU DSA trader status and any regional declarations
>
> The quote is valid for 7 days and assumes the repository is unchanged from this assessment. Work added to the repo before submission is scoped and quoted before anything starts.
